MOSCOW, May 14 (Reuters) - Gazprom's gas processing plant in Russia's southern Astrakhan region has halted motor fuel production after a fire broke out on May 13 following [a drone attack](#), two industry sources told Reuters.

They said the plant suspended operations, including a combined unit for processing stable condensate with capacity of 3 million metric tons per year, which produces gasoline and diesel at the facility.

Astrakhan local governor Igor Babushkin [reported](#) in his Telegram channel on Wednesday that debris from a Ukrainian drone attack caused a fire at a gas processing plant.

According to the sources, restoring motor fuel output could take from several weeks to several months.

Gazprom did not immediately respond to a Reuters request for comment.

One of the sources said the Astrakhan plant had been offline since September last year and resumed condensate processing and motor fuel production only weeks before the latest attack in April.

The second source said equipment for hydrogen sulphide processing and sulphur recovery was also damaged in the drone attack.
